

Support for academics from Ukraine

1. department
III 2 - Sustainable Production, Resource Conservation and Material Cycles
2. brief profile of the department
<p>Department III 2 is the "Department for Technical Environmental Protection". Our portfolio of tasks focuses on technical environmental protection in production and processes as well as essential areas of public services. We improve environmental performance through effective technologies and plant safety in raw material extraction and production with the aim of achieving emission reductions in normal and malfunctioning operations as well as ensuring the greatest possible removal of pollutants and interfering substances from the cycle (waste technology, waste water technology) and report on this at various levels. We are convinced that goals like climate protection and a pollutant free environment can only be achieved with highly efficient, innovative industrial (large-scale) plants that are at least state of the art.</p>
