1 Introduction

1.1 Background: the GoApply project

This report is a deliverable of the project **GoApply – Multidimensional governance of climate change adaptation in policy making and practice**¹ (11/2016 – 04/2019). The project is co-funded by the Interreg V B Alpine Space Programme 2014-2020, runs under programme priority 4 “Well-governed Alpine Space” and addresses the programme objective “Increase the application of multilevel and transnational governance in the Alpine Space”.

GoApply responds to challenges, barriers and gaps related to governance that currently all Alpine countries are facing in their efforts to implement their national adaptation strategies in practice. The project aims to strengthen capacities for the governance and implementation of climate adaptation across multiple levels and sectors. In doing so, it pursues the following specific objectives in interlinked work packages:

- (1) Improving understanding of adaptation governance systems and promoting vertical coordination and cooperation for the implementation of adaptation policies across levels [WP1]
- (2) Supporting effective horizontal integration of climate change adaptation into relevant sector policies (mainstreaming) [WP2]
- (3) Strengthening more active involvement of public and non-public stakeholders in regions and municipalities and stimulating adaptation coordination structures on sub-national levels [WP3]
- (4) Sustaining, deepening and leveraging transnational cooperation, knowledge transfer and learning in the context of the EU Strategy for the Alpine Region (EUSALP) and the Alpine Convention [WP4]

GoApply tackles these objectives in a transnational approach. The project builds on the network of the national public adaptation coordinators responsible for climate adaptation policy-making in the Alpine countries. These institutions are carrying out the project as project partners and in observer roles.

WP3 – “Stakeholder involvement on local and regional level” of the GoApply project is centered around four main lines of activities:

- Identifying, selecting and co-designing stakeholder interaction formats addressing the local and regional level
- Applying stakeholder interaction formats on the local and regional level
- Reflecting local stakeholder involvement for improvement of multilevel governance
- Transnational science – practice lab on adaptation governance

The report at hand contributes to identifying, selecting and co-designing stakeholder interaction formats addressing the local and regional level.

1.2 Goals of the report

This concept paper presents the application of the “Criteria and Factors for Successful Stakeholder Participation” concept (henceforth: criteria paper) for the development and implementation of a

¹ <http://www.alpine-space.eu/projects/goapply/en/home>

stakeholder format in the pilot regions in GoApply. We present the deliberation and preparation process for the stakeholder activities in the Kempten/ Allgäu pilot region in Germany.

Most countries in the Alpine region have developed a national adaptation strategy and adaptation action plans. In Germany, adaptation strategies are also in place on the state level of all 16 “Bundesländer”. However, climate change adaptation (CCA) is, to a large extent, implemented on the regional and the local level. Local adaptation strategies and action plans are in the early stages of development in many regions. In addition, successful implementation is challenged by problems regarding coordination between different fields of action, administrative levels and stakeholder groups. Resources and capacities for improved local adaptation governance are often scarce. Therefore, the approach in WP3 is to conceptualize and test a stakeholder interaction format focused on a municipality in the early stages of its adaptation process. The German pilot region Kempten/ Allgäu has been an exemplary municipality with regard to climate mitigation activities. However, climate adaptation is a comparatively new topic for the city. While there is a growing interest among key stakeholders within the city’s administration, there is no comprehensive adaptation strategy (for more information: see German country report WP1 – case study 1).

As elaborated in the criteria paper, general criteria and success factors can be derived from scientific inquiry and practical experience in stakeholder participation efforts. However, all interaction is context-specific. Subsequently, we describe how the concept for the stakeholder interaction format in Kempten/Allgäu was developed through application of the specific success factors identified in the criteria paper. Therefore, this concept paper is structured according to the success factors presented in the criteria paper (pp 9-21).

2 Concept for stakeholder format implementation in German pilot region

2.1 Conceptual phase

Consideration of existing structures / processes

The concept development for the stakeholder interaction formats in the pilot region is built on three pillars:

- close cooperation with the local climate management office in Kempten, which also serves as observer in GoApply. The local climate manager is the central coordination and information hub for mitigation and adaptation activities in Kempten and therefore a primary source for information of existing structure and processes as well as on strategic focus for the interaction formats. The climate management office takes the role of “bridging organization”, linking stakeholders and project facilitators; the office is well-connected within the region and lowers transaction costs for stakeholder involvement. It also acts as advocate for local interests and objectives;
- lessons drawn from the analysis conducted in WP1 of GoApply: Kempten was chosen as one of the German case studies to examine the local climate governance structure, drivers and challenges for adaptation issues. The results informed the concept development of the interaction formats (for more information: see country report WP1);

- past experience with local format implementation, in particular the “market place” event conducted in Kempten in June 2017. The lessons learned as well as the relations established during the preparation and implementation benefitted the planning process in GoApply

In a more general sense, the broad expertise of UBA-KomPass regarding implementation and evaluation of stakeholder activities in climate change adaptation served to inform the conceptualization.

Clear goals of the process

In close coordination with the local climate manager, the goals of the interaction formats focus on:

- bringing together decision-makers and experts from administration and policy-making who have a stake in regional and local climate change adaptation
- promoting awareness-raising, information exchange regarding climate risks and impacts for city and region
- supporting exchange on experiences with climate adaptation activities, identifying specific topics most relevant to the stakeholders
- discussing specific opportunities and challenges in Kempten regarding climate change adaptation
- identifying specific needs of stakeholder in order to promote CCA activities (resources, governance structures etc.)
- co-developing next steps to be taken towards adaptation, if possible with concrete, actionable measures
- providing the opportunity for networking, increased cooperation between stakeholder groups
- finding out which next steps could be taken toward adaptation

Clear identification of target groups / thorough stakeholder analysis

Stakeholder identification and analysis is also conducted in close cooperation with local climate management office and builds upon previous experience with stakeholder interaction during the market place event 2017. Target groups are:

- experts in local and regional public authorities (environment, spatial planning and housing, water management, public health, agriculture, and forestry),
- local policy-makers,
- sectoral agencies for energy and environmental issues, city management
- infrastructure and public service providers responsible for municipal housing, energy and utility provision, municipal waste management
- local businesses (e.g. from agriculture, architecture, tourism),
- business support organisations such as the regional commerce chamber, farmers' associations, tourism association
- interest groups and NGOs with focus on environmental and social issues, civil protection, and tourism

Since the format is conducted as two workshops (see below), lessons drawn from the first workshop feed into the planning for the second event, e.g. regarding the decision whether to include additional target groups or focus on specific groups.

Clear methodological concept

Given the goals of the process and the analysis of existing processes as well as stakeholders, the format is planned as a sequence of two half-day workshops conducted in Kempten. The aimed degree of participation is high – “stakeholder co-decision/co-design”; stakeholders are involved in situation analysis, strategic identification of topics and co-creation of possible action options.

Workshop I focuses on establishing exchange of information and experiences between target groups, raising awareness on climate risks and impacts, identifying major challenges and opportunities as well as most important issues / topics for local adaptation. The lessons from workshop I are then used to design **workshop II**. Here, the focus lies on the specific issues identified. Participants are encouraged to discuss specific needs as well as concrete steps and measures to move forward. Conducting the workshops in a sequence creates room for reflection in between and ensures that the process is stakeholder-led, i.e. oriented towards the specific needs and interests of the actors.

Concept workshop I

The workshop is structured into an input and a discussion phase.

Phase I includes a short input presentation by UBA-KomPass, an introduction into the project and the goals of the process, and an overview on climate risks and impacts for the region. The emphasis of the first phase lies on input presentations by stakeholders themselves. Representatives from different sectors present how their field of action is already affected by climate change, what efforts are already undertaken, and what the specific challenges are from their perspective. The inputs are identified and prepared in cooperation between UBA-KomPass, local climate management and the stakeholders themselves; topics chosen are:

- public health - direct and indirect impacts of climate change
- climate impacts on biodiversity and urban green spaces
- adaptation challenges for agriculture
- coping with extreme events – torrential rain fall and river floods
- impacts of climate change on regional tourism development

The second phase of the event emphasizes discussion and exchange; three major questions have been prepared:

- What are specific challenges regarding climate change for Kempten and the Allgäu region?
- What are the chances and opportunities for climate change adaptation?
- What kind of support do stakeholders need? Which steps would be required to be taken next on the path towards increased climate resilience?

Methods used are:

- discussion in small groups,

- presentation of group discussions, guided by moderators, documentation via metaplan technique

The event wraps up with a summary and an outlook on the next steps.

Concept workshop II

Based on results of workshop I, specific challenges and issues relevant to the stakeholders in Kempten are identified and set as topics for a more thorough discussion. The aims of the workshop are

- How do we get from challenges to specific adaptation action? What kind of measures are needed, and how can they be developed and implemented?
- How do we come to an understanding of specific next steps towards implementing measures incl. allocation of responsibility and cooperation requirements?
- In addition, the workshop aims at promoting reflection and relationship-building between actors, to increase motivation and commit for further action.

The event is structured into three phases. The first phase introduces the goals and process of the workshop itself as well as two input presentations:

- on climate change impacts in Kempten (UBA-KomPass)
- on the specific topic chosen in workshop I (here: land use management/land use development and climate change adaptation)

The second phase brings the stakeholders together in changing small groups in order to exchange ideas and develop solutions about topics/ questions jointly decided upon.

Methods used are:

- Market Place of ideas: 20 minute brainstorming and presentation on topics / questions;
- Open Space format: 2 discussion rounds in changing small groups with self-organized documentation and interchange, supported by professional facilitation.

In the third phase the results of the group work are presented and discussed as well as next steps.

Methods used are:

- Short presentations of results from group work
- Moderated plenary discussion
- Documentation of results using metaplan cards and flip charts

Detailed agendas for both workshop as well as the detailed concept for workshop II can be found in the annex (in German).

Identification of possible barriers to participation / Consideration of format context

Possible barriers to participation are identified mostly as scheduling issues and consideration of stakeholders' workload. To avoid scheduling conflicts with other climate-related events, administrative and political tasks (such as city council sessions), and general scheduling issues such as holidays, the events are closely coordinated with the local climate management office and the

professional event facilitators. In addition, both workshops are planned as half-day events to permit as many stakeholders as possible to participate, despite the heavy workload of many participants. Both events take place in Kempten as the most easily accessible location in the Allgäu region closest to most participants.

Sensitivity towards the specific social, economic and environmental context is considered through a careful stakeholder analysis as well as constant cooperation and exchange with the local climate manager.

Consistency between goals, target groups, methods / appropriateness of applied methods

Consistency and appropriateness is ensured through three efforts:

- close cooperation with local climate management office and the professional event facilitators regarding goals, applied methods and target group interests
- early involvement of stakeholders, e.g. in preparation of input presentations in workshop I
- reflection and adaptation of goals, methods and conduct between workshops I and II

Define role of staff and facilitators

Roles are clearly defined from the outset of the process. Format organization and implementation is driven by the local climate management office which is also responsible for communication and coordination with the participants. The stakeholders themselves contribute topics, experiences, know-how and ideas in order to promote an adaptation process based on local interests and priorities. UBA-KomPass provides the framework and resources for organizing the formats, functions as facilitator in the first workshop I. A professional workshop facilitation is commissioned to prepare, moderate and document workshop II.

Sufficient resource allocation

Sufficient resources are planned for both workshop through the GoApply project, covering coordination and preparation as well as implementation and follow-up. Budget is available for a professional event facilitation. In addition, the local climate management office contributed substantially, mainly in form of working hours and expertise.

Develop monitoring and evaluation concept

A monitoring and evaluation concept is developed concurrently with the workshop planning. In workshop I, monitoring is conducted through participant observation. In addition, participants are asked for their feedback at the end of the event through a simple point-allocation exercise. Results are used to improve preparation for workshop II.

In workshop II, participant observation is also used to accompany the event itself. Evaluation is conducted through a survey among participants at the end of the workshop. The questionnaire is developed in accordance with further UBA-KomPass research activities (evaluation of market place events, project on innovative participatory instruments) to provide comparability. It covers questions on the quality and appropriateness of the different phases and methods applied, the assessment of the discussions and network opportunities as well as on general perception of climate change adaptation in the pilot region.

2.2 Implementation phase

Invitation and monitoring of participation

Invitation and participation management is conducted by the local climate management (workshop I and II) and the professional event facilitation (workshop II), using the existing stakeholder network in the pilot region. Invitations are sent out timely via e-mail; follow up is conducted via phone or in-person.

Establish general rules of conduct

The stakeholder process relies on open exchange, contribution and commitment by all participating stakeholders. Increased cooperation and working relationships between stakeholders are stated goals of the formats. Respectful discussion on equal footing is therefore crucial. The methods applied in both workshops promote these goals. Goals and methods themselves are introduced at the beginning of each event; event facilitators monitor compliance.

Target group-specific knowledge transfer, exchange and creation / appropriate methods

Topics and content of the discussion are, to a large extent, stakeholder-driven. Stakeholder presenters provide input on their specific issues; the format of the presentation and the use of workshop methods are prepared together with the local climate management office. Input on climate change impacts, adaptation and efforts within GoApply are provided through short presentations by facilitators to provide sufficient background for the discussion. The methods are aimed at promoting knowledge transfer, expert assessment, and exchange through small group discussions, the market place and open space formats. Feedback provided by participants on the appropriateness of methods is used for potential adjustments.

Engagement of stakeholders

As described above, all workshop methods applied aim at engaging stakeholders in the discussion. The objectives of the formats themselves seek to provide added value and support stakeholders in their efforts to improve climate adaptation in the pilot region. Emphasis is put on opportunities for

climate action based on the specific strengths and assets of the pilot region in order to promote motivation for action. Atmospheric factors play an important role for successful workshops; the concept includes plenty of time for breaks and informal exchange, catering is provided throughout both workshops.

Adaptability and flexibility throughout the format

Both workshops are designed to rely on participants' inputs and contribution in order to shape the process according to stakeholders' needs. While the goal for the first workshop and methods used are set in advance, the topics for input and discussion are provided by the participants. The concept and implementation of workshop II is dependent on the outcome of workshop I. In addition, interaction methods used ensure that new content and topics can be incorporated throughout the events

2.3 Post-Processing / follow-up

Evaluation, documentation and communication of results (see annex also)

Evaluation is conducted according to prepared concept (see above). Documentations are prepared for both workshops. They include written summaries of discussions and results, a photo documentation of flipcharts, drawings and the event itself as well as the input presentation held in both events. Additional contact information for follow-up is provided. The local climate management office is available for further feedback and also keeps participants apprised about next steps taken.

Implementation of results and impact on process/project / legacy arrangement

Impacts of the process remain open at this point of the project. We consider the following factors as favorable towards consolidation and further development of the impulses created through the format:

Stakeholder commitment and cooperation: all participating stakeholders engaged in discussions, supported the process and stated the importance of adaptation in general and improved cooperation in particular. In the end, they are the drivers of the process on local level.

The climate management office, which serves as bridging organization for this process and represents a permanent hub for coordination and information. This setup ensures, that results and impulses of the formats are carried over into "everyday" adaptation work, even after the GoApply project is completed. The established relationship between local climate management and UBA-KomPass provides a stable basis for further cooperation.

Connecting format results to existing processes and local policy-making: stakeholders emphasized the importance of integrating the results of the adaptation workshops into existing efforts regarding mitigation, in particular the "Master Plan 100% Climate Protection" (see also country report WP1) which enjoys broad support. In addition, workshop results are planned to be presented before the city council to carry the discussion over into policy-making and gather additional support.

EU-Projekt zu Klimawandelanpassung in Kempten: GoApply - “Multidimensional Governance of Climate Change Adaptation in Policy Making and Practice”

Die Folgen des Klimawandels sind bereits im Alpenraum spürbar

Der Klimawandel und seine Folgen sind eine der großen Herausforderungen für den Alpenraum. Schon heute sind weitreichende Klimaänderungen zu beobachten, die Extremereignisse wie Starkregen, Hochwasser und Hitzewellen zur Folge haben. Da sich diese Extreme in Zukunft noch verstärken werden, müssen wir uns an die Veränderungen vorsorgend anpassen. Dazu werden Anpassungsstrategien und -maßnahmen auf regionaler und lokaler Ebene entwickelt und umgesetzt.

Das GoApply-Projekt – Kapazitäten für Klimaanpassung stärken

Mit dem Interreg-Projekt „GoApply“ sollen Strategien zur Klimaanpassung im Alpenraum ausgebaut und besser in den politischen Prozess eingebaut werden. Die Arbeit soll Verantwortliche für Klimaanpassungsstrategien auf lokaler und regionaler Ebene dabei unterstützen, konkrete Aktivitäten umzusetzen und andere Akteure hierbei mitzunehmen. Zudem möchte das Projekt den grenzüberschreitenden Austausch im Alpenraum verbessern. In einem Netzwerk aus nationalen Umweltbehörden und regionalen Partnern lernen und profitieren alle Beteiligten von der Vielfalt an Handlungsansätzen in den Regionen.

Die Stadt Kempten nimmt als sog. „Observer“ (Beobachter) am Projekt teil und arbeitet eng mit dem Umweltbundesamt - Fachgebiet Klimafolgen und Anpassung (KomPass) zusammen.

Gemeinsam für ein klimarobustes Kempten

Anpassungsmaßnahmen an den Klimawandel sollen mit verschiedenen gesellschaftlichen Gruppen geplant und umgesetzt werden. Das Projekt will Politik, Verwaltung, Verbände, Vereinen, Unternehmen und die Bevölkerung unterstützen, sich gemeinsam für eine zukunftsfähige, nachhaltige und klimarobuste Region einzusetzen.

Mit dem Projekt GoApply unterstützen wir die Arbeit vor Ort, in dem wir gemeinsam Herausforderungen für die Region im Klimawandel diskutieren und konkrete Handlungsoptionen entwickeln. Im Austausch mit verschiedenen Akteuren in Stadt und

Region können wir von guten Praxisbeispielen lernen und Erfolgsfaktoren entwickeln. Dafür führen wir u.a. zwei Workshopveranstaltungen in Kempten durch.

Hintergrund zum Projekt GoApply

Das Projekt GoApply wird ko-finanziert vom Europäischen Fonds für regionale Entwicklung (EFRE) durch das Interreg-Alpenraumprogramm. Weitere Informationen finden Sie in englischer Sprache unter: <http://www.alpine-space.eu/projects/goapply/en/home>

Insgesamt arbeiten 4 Projektpartner und 18 sogenannte „Observer“ aus 7 Ländern des Alpenraumes zusammen. Es gibt darüber hinaus enge Verbindungen mit internationalen Organisationen und Entwicklungsstrategien für den Alpenraum, wie bspw. der EU-Strategie für den Alpenraum (EUSALP) und der Alpenkonvention.

Expertenworkshop

Flächenmanagement und Klimaanpassung: Nachhaltige Strategien für die Stadt Kempen

25. Oktober 2018 | Pfarrheim St. Lorenz Kempen

Ziel der Veranstaltung:

Für die Stadtgesellschaft Kempen ist die steigende Flächennachfrage eine städteplanerische Herausforderung. Die Auswirkungen des Klimawandels erhöhen die Brisanz des Themas, da z.B. städtebauliche Planungen verschiedene Klimawandelfolgen und damit verbundene Vorsorge- und Anpassungsoptionen in den Blick nehmen müssen.

Um notwendige Handlungsfelder für die Stadt Kempen zu identifizieren, diskutieren Vertreter aus Verwaltung, Stadtplanung und -entwicklung, Wohnungsbau, Wirtschaft, Handwerk, Landwirtschaft und Naturschutz gemeinsam die Herausforderungen und entwickeln Ideen und mögliche Strategien. Ziel ist es, Empfehlungen zum Umgang mit Klimawandelfolgen für die Fortschreibung des „Masterplans 100 % Klimaschutz bis 2050“ zu formulieren.

Programm:

ab 08:30 Ankommen bei Kaffee und Brezen

09:00 Begrüßung und Einführung durch Veranstalter und Moderation

Impulsvorträge:

- Klimawandel und die Folgen für Kempen und das Allgäu (Umweltbundesamt)
- Flächenverbrauch - IST-Zustand und Entwicklungen (Stadt Kempen)

Denk- und Diskussionsrunden: „*Flächenmanagement und Klimaanpassung: Herausforderungen, Ideen und Strategien für die Stadt Kempen*“

Austausch zu den Arbeitsergebnissen

Vereinbarungen und Verabschiedung

13:00 Ende der Veranstaltung

*Für Ihr leibliches Wohl während der Veranstaltung ist gesorgt.
Bitte beachten Sie, dass die Veranstaltung fotografisch dokumentiert wird.
Mit Ihrer Teilnahme stimmen Sie einer möglichen Veröffentlichung von Aufnahmen zu.*

Expertenworkshop „Flächenmanagement und Klimaanpassung – nachhaltige Strategien für Kempten“

Ihre Meinung ist gefragt!

Sehr geehrte Teilnehmende,

zum Abschluss möchten wir gerne von Ihnen erfahren, wie zufrieden Sie mit dem Expertenworkshop sind und wie Sie die Folgen des Klimawandels sowie Ihre Möglichkeiten zur Anpassung im Flächenmanagement einschätzen.

Ihre Antworten dienen zur Weiterentwicklung der Veranstaltungen des Umweltbundesamtes und werden im Rahmen des Forschungsprojektes GoApply verwendet.

Die Auswertung des Fragebogens erfolgt **anonymisiert**, d.h. **Ihre Antworten können nicht mit Ihrer Person in Verbindung gebracht werden.**

Lesen Sie bitte jede Frage sorgfältig durch und kreuzen Sie die Antwort an, die Ihrer Meinung am besten entspricht.

Vielen Dank für Ihr Mitwirken!

Bitte umblättern, dann geht es los →

In welcher Funktion haben Sie vor allem an diesem Workshop teilgenommen?

Bitte wählen Sie nur eine Antwortalternative.

☐	Als Vertreter/in einer zivilgesellschaftlichen Organisation / eines Umwelt- und Sozialverbandes/-organisation
☐	Als Vertreter/in eines Unternehmens / Wirtschaftsverbandes/-organisation
☐	Als Vertreter/in der öffentlichen Verwaltung
☐	Als Vertreter/in der Forschung / Beratung / Bildung
☐	In anderer Funktion, und zwar:

Bitte beantworten Sie die folgenden Fragen bezogen auf die Funktion, in der Sie an diesem Workshop teilgenommen haben.

Hat Ihre Organisation (z. B. NGO, Unternehmen, Verwaltung etc.) bereits Maßnahmen zur Anpassung an den Klimawandel umgesetzt?

Bitte wählen Sie die Antwortalternative, die für Ihre Organisation am besten zutrifft.

☐	Wir setzen bereits Maßnahmen zur Anpassung an den Klimawandel um und werden dies auch in den nächsten Monaten beibehalten bzw. noch weitere Anpassungsmaßnahmen umsetzen.
☐	Bisher haben wir in unserer Organisation keine Maßnahmen zur Anpassung an den Klimawandel umgesetzt, ...
☐	und ich sehe keinen Grund , daran etwas zu ändern.
☐	wir würden das aber gerne tun , wissen jedoch noch nicht genau wie.
☐	es ist aber unser festes Ziel , Maßnahmen zur Anpassung an den Klimawandel umzusetzen. Wir wissen auch schon genau wie, wir müssen unseren Plan nur noch in die Tat umsetzen .

Kreuzen Sie bitte jeweils die Antwort an, die Ihrer Einschätzung am besten entspricht.
